## **Fund Manager Comments**

The global economy continues to be buffeted by trade tensions even when the financial markets have rallied in early 2019. With a performance of 13.07% in the first three months of 2019, the S&P 500 has almost fully recover the 13.97% loss suffered in quarter four of 2018.<sup>1</sup> A slowing, but growing global economy and patient policymakers were and will be the key themes supportive of risk assets. A reduction in perceived geopolitical risk, primarily around US-China has also buoyed market sentiment. Although labour markets in most economies continue to support demand, economic data continue to be mixed and the capacity of domestic strength to outweigh the latter is waning.

Trade is not the only factor affecting global prospects, so is policy uncertainty. Policy traction in China is key for stabilising growth in the area and for the global economy as well through the value chain and the confidence channel. China has been a drag on global growth since early 2018. Europe and Emerging Markets (EMs) took a hit from China's growth slowdown. But the tide looks to be turning with Beijing easing fiscal and monetary policies. China economic data were firmer, after a weak start of the year. The March manufacturing Purchasing Managers' Index (PMI) edged up to a higher-than-expected 50.5 in March, from 49.2 in Feb<sup>2</sup>. The PMI returned to the expansionary territory after contracting for 3 consecutive month. Based on IMF data, China has accounted for approximately one-third of global growth since 2011 and a turnover in China is likely to lift growth globally.

In addition, deploying fiscal policy, particularly in Europe is crucial to offset domestic idiosyncratic downdrafts accentuated by external headwinds. Following the change in monetary policy guidance in major global economies, financial conditions have loosened again. Together with the US Federal Reserve (Fed), the European Central Bank (ECB) has signalled a pause in hikes, and has announced that it would launch a series of targeted long-term refinancing operations (TLTROs) in September to ward off a credit squeeze. The Bank of England in the midst of Brexit also signalled a pause to its rate tightening. While Brexit uncertainties continue to cast a shadow over the growth outlook of the UK, the Parliament took control of the process. More recently, on the 11th April the EU agreed to extend the Brexit deadline until October 31st, 2019, postponing the UK's departure about six months from the scheduled April 12th departure date.

Recent central bank actions supported the view of a global slowdown but it has created a positive momentum across global financial markets and provided a boost to economic activity going forward. In the short term, the strength in equities and credit may persist for some due to momentum and some technical levels having been breached in equities. With measures to prevent further flattening of the yield curve and tightening of lending standards, weakening economic data presents a foreboding risk. Nevertheless, with increased liquidity through monetary policy normalisation and reduced geopolitical risks, confidence should be restored after key events, providing an impetus for sustained growth.

As the global economy struggled to gain momentum in the first quarter of 2019, global central banks stepped into the breach, launching multiple waves of asset purchase program and implementing low or even negative interest rates to enhance liquidity and stimulate growth. In its March monetary policy meeting, the Fed decided to keep interest rates steady and updated its "dot plot" projections. The projections are for no rate hike in 2019, and just one in 2020, whereas three months ago, the same "dot plot" reflected two rates hikes for 2019. However, it is important to realise that the latter does not grepresent the collective, consensus view of the Fed. The Fed's chairman de-emphasise the importance of the dots and indicated that the institution is data dependent and reacts to economic conditions.

<sup>8</sup> Indeed, the recent dovish pivot is important. The central bank's pause in policy tightening has eased the pressure from rising short-term rates and a stronger dollar on fixed income assets. With the Fed indicating that it may allow for modest overshoots above its inflation target, it exhibits confidence that once inflation starts to rise it will be able to pull it back under control. These factors point to potential for a moderate steepening of the U.S. yield c unve. However, the latter recently flatten and inverted. The spread between yields on the 10-year Treasury yield and 3-month Treasury bill recently for inverted for the first time since 2007. Historically, yield curve inversion has preceded recessions but in the current environment, comparisons with previous f inversions are flawed due to the low level of short-term rates relative to prior cycles and lower term premiums following QE.

In the Euro Area, the European Central Bank (ECB) also kept its key interest rates unchanged as it remains highly exposed to the global slowdown in trade caused by weakness in emerging markets and the US-China trade dispute. On those premise, investors started moving into haven assets. The demand for the 10 Year German Bond was so high that yields dropped below zero for the first time since 2016. Nevertheless, with a more dovish stance towards monetary-policy normalisation, a slowing, but still growing, global economy will be supportive to the fixed income markets.

Undertakings for Collective Investments in Transferable Securities (UCITS) are generally medium to long term inv

Warning: The value of your investment may go down as well as up and past performance is not a reliable guide to future performance.

Commission and incentives may be paid and if so, would be included in the overall costs. Deductions for charges and expenses are not made uniformly throughout the life of the product, but are loaded disproportionately onto the early period.

Warning: Withdrawal from the product in the early period might affect the amount of money that the investor receives due to the practice of front-end loading, and the amount received might be less than the amount invested.

A schedule of fees and charges and maximum commissions is available from Oasis Global Management Company (Ireland) Ltd. ("the Management Company") on request. UCITS are traded at ruling prices and forward pricing is used. Portfolios are valued at 08h00 daily using the previous day's prices as at 22h00 GMT. All necessary documentation must be received before 14h00. Investments are made globally across a number of countries and currencies.

## Warning: This product may be affected by changes in currency exchange rates.

Prices are calculated on a net asset value basis which is the total value of all assets in the Oasis Crescent Global Income Fund, a "Sub-Fund" of Oasis Crescent Global Investment Fund (Ireland) plc (the "Fund"), including any income accruals and less any permissible deductions from the Sub-Fund which may include but not be limited to auditors fees, bank charges, custodian fees, management fees and investment advisory fees. UCITS can engage in borrowing and scrip lending and may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity.

Warning: The income that an investor may get from an investment may go down as well as up.

The Management Company and the Fund are regulated by the Central Bank of Ireland and the UCITS funds are managed in accordance with the UCITS regulations (Ireland). Performance figures quoted are from Oasis Research and OECD for the period ending 31 March 2019 for lump sum investment, using NAV-NAV prices with income distributions reinvested. Returns may vary depending on the actual date of investment and the actual date of reinvestment of income. The Key Investor Information Documents or a full Prospectus are available on request from the Management Company and Oasis Crescent Management Company Ltd. The Fund is regulated by the Central Bank of Ireland and the Sub-Fund is registered with the Financial Services Board for distribution in South Africa and with the Financial Conduct Authority for distribution in the United Kingdom. The Sub-Fund has a Total Expense Ratio (TER) of 0.70%, which is the average Net Asset Value of the portfolio incurred as charges, levies and fees related to the management of the portfolio A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The ratio does not include transaction costs. The current TER cannot be regarded as an indication of future TERs. Full details and basis of accolades received are available from the Management Company and Oasis Crescent Management Company Ltd.
