Fund Manager Comments

Global economic growth has remained resilient over recent years despite the impact of lower global trade, lower productivity, higher interest rates and the cost of living crises. A driver of this resilience has been the services activity which has outperformed manufacturing. Looking ahead we are expecting the combination of lower inflation and interest rates over the next 24 months and the cost of living crises subsiding to support stronger economic growth. Productivity is also expected to improve but the geo political pressure will continue to constrain global trade. Inflation is peaking globally and as interest rates decline and economic growth improves we expect asset, equity and property values to increase. Factors that could boost global growth are: 1) Start of global interest rate cut cycle; 2) Lower energy prices; 3) Renewed fiscal policy support for infrastructure development and reindustrialisation 4) Cessation of war in the Middle East and Ukraine; and 5) Technology led improvement in productivity. Factors that could constrain global growth are: 1) Escalation of war in the Middle East and Ukraine 2) Renewed cost push inflation (eg. higher global oil prices) 3) Disorderly unwind of Chinese property market; 4) Significant unwinding of housing markets; and 5) Disruption from technology on labour markets, especially AI.

Global equity indices have been dominated by the mega caps in the technology sector that have attracted major capital flows and valuations have been driven by expectations of more and more growth. But growth is starting to slow and this is evident when we look at some of the key players forming part of the Magnificent 7. Tesla is down 45% but it is still overvalued because EV (Electric Vehicle) demand is slowing while there has been a significant increase in supply which is resulting in EV prices falling. The supply from China has been increasing significantly with Chinese market share of global EV sales increasing from less than 10% to 58% over the past years while the US (mainly Tesla) has declined from 48% to 9.7% market share of global EV sales over the past 10 years. Another company that is being caught in the middle of the global geopolitical stress is Apple who is being forced to move a lot of their Chinese production capacity closer to home but this is at a much higher cost. Apple is also losing market share in China and their profitability is under pressure. Apple was a great stock in our portfolio which we have exited. When we look at Nvidia, which has also recently come under pressure, we can see that this company has been very volatile over the years and it has declined by more than 50% on 8 occasions over the past 20 years. The US is providing massive incentives and grants to increase the manufacturing of electronic chips on home soil and we are seeing an increase in supply and drop in prices which indicates that there could be further downside for Nvidia.

The more volatile geopolitical and market environment is suitable for the Oasis philosophy and we continue to find companies with market leadership, competitive advantages, sustainability, strong balance sheets, outstanding management, delivering high levels of profitability and cash flow and are attractively priced. Your portfolio has a high exposure to sectors with positive secular drivers with the three largest sectors being Information Technology, Healthcare and Communication Services.
