The Rest of the world (ROW) is benefitting from lower cost of capital due to China exporting deflation by diverting exports from the USA to the ROW, lower inflation, but rising competition from imports putting jobs and currencies under pressure. Since the USA election in November 2024, Chinese exports to US declined by 24.9% but increased in Asia, Europe and ROW by 13.0%, 8.9% and 7.1% respectively. All of this is playing out in the currency market, with the US\$ index weakening by 9.9% in the first 9 months of the year, with the Euro up 12.2%, Sterling up 7.0% and commodity currencies like the Rand (up 8.6%) strengthening. The stronger currencies are assisting in lowering import inflation and boosting US\$ returns for investors. The Global economic risks remain high as 1) the long term impact of Tariffs remain unclear, 2) government debt is expanding rapidly, 3) deteriorating demographics in many countries, 4) unstable governments, 5) geopolitical uncertainty, 6) high inflation and 7) slow economic growth. The economies that are able to navigate through this period will prosper.

Global central banks have started reducing policy rates, real rates ranging from -0.05% in EU, 1.35% in USA and 3.4% in China compared to 20 year average real rates of -0.89%, -0.71% and 1.43% respectively. Real rates have declined due to rising inflation in Europe and US and a cut in interest rates in US. If inflationary expectations rise due to the trade war, there is little scope to cut policy rates except for China, some Emerging markets which has substantial scope to cut policy rates and reducing scope to cut in the US. Europe rate cycle looks like it has reached its cyclical low.
